Rezolvaţi următoarele exercitii

– preluate din tutorialul Oracle-4:

1. Display the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the decimal position.
2. Display the minimum, maximum, sum, and average salary for each job type.
3. Write a query to display the number of people with the same job.
4. Determine the number of managers without listing them. Label the column Number of Managers.
5. Write a query that will display the difference between the highest and lowest salaries. Label the column DIFFERENCE.
6. Display the manager number and the salary of the lowest paid employee for that manager. Exclude anyone where the manager id is not known. Exclude any groups where the minimum salary is less than $1000. Sort the output in descending order of salary.
7. Write a query to display the department name, location name, number of employees, and the average salary for all employees in that department. Label the columns dname, loc, Number of People, and Salary, respectively.
8. Create a query that will display the total number of employees and of that total the number who were hired in 1980, 1981, 1982, and 1983, label the columns appropriately.
9. Create a matrix query to display the job, the salary for that job based upon department number and the total salary for that job for all departments, giving each column an appropriate label.
